

Rest assured it's
safe with colored
mulch.

At Colorbiotics, our highly qualified team of research professionals is constantly working to develop new and innovative mulch colorant of exceptional quality. It's this relentless passion for perfection and unparalleled service that propelled Colorbiotics to become the global leader in landscape coatings technology. Colorbiotics is the only landscape colorant supplier whose production process adheres to ISO 9001 certification standards and 100 percent of our product is manufactured on site.

* Mulch is not recommended for consumption.

How does your
garden grow?

In fact, an independent laboratory study supports that statement.

The colorants used in our colored mulch were recently tested by Stillmeadow, Inc., a full-service laboratory and contract research facility in Sugar Land, Texas. The facility studied how acute exposure to our colorants affected skin, eyes, lungs, and the digestive system.

The Stillmeadow study shows that Colorbiotics colorants are safe for people, animals, and the environment.

The results placed our colorants in the lowest and safest level of toxicity possible: Category IV, the same as everyday sugar.*

Salt and baking soda, by contrast, actually have a higher toxicity level.

Colorbiotics is the only colorant supplier who has participated in this study, and we did so to give our customers peace of mind.

When safety questions arise, we want to make sure you can answer them with absolute assurance.

If you have additional questions, please call us.
