

ROTOTILT

THE MOST FLEXIBLE,
MONEY MAKING
MACHINE ON THE
JOB SITE.

Do the math.

When I reached the job site, the customer asked 'where was the rest of the equipment?' I told him that with one excavator, equipped with a Rototilt attachment, I can do everything I need... dig, grade, back-fill and with less laborers. It's why our Rototilt machines are always out working. And because it tilts and rotates 360°, I can work in tight areas others can't.

Rototilt User Benefits Customer Feedback

Reduced Manpower:

“Rototilt reduces the number of laborers you need and no other product can do that”.
This is one of the most common benefits heard from Rototilt customers.

Less Equipment:

The other most common benefit heard from Rototilt customers.

“We can do with one machine what we used to do with 2 or 3 different machines”.

“We can dig, backfill, and grade or contour all with one machine”.

“When I showed up at the job site, my customer asked when is the rest of the equipment coming? It’s here I answered. In most cases I can do everything I need with a Rototilt equipped excavator”.

More Work:

“Our Rototilt machines are always out working”. Rototilt customers say they often get more work when their clients see how efficient and flexible the Rototilt attachment is. The result is higher utilization of the excavator and often work others can’t do. **“Don’t tell our competitors”.**

Time Savings:

With the ability to work around and under all sorts of obstacles, to position the bucket or other attachments at any angle, and to minimize the need to reposition the machine, the Rototilt saves significant time in both basic and demanding tasks.

“30-40% time savings on most jobs”.

“Two times faster on grading”.

“Half the time doing residential basements and levelling”.

“Really shines on backfilling”.

“Price work is where it really shines”.

“Sit in one spot – don’t have to move”.

“Up to 75% savings on landscaping”.

“Light demolition work – faster, cleaner, safer”.

“It angles, tilts and spins 360 degrees which really helps with grading and utility relocation”.

Safety:

In all customer surveys, another comment repeated was safety. Mainly as a result of fewer laborers and less machine congestion.
