

## Time to assemble your Greely's Garden Box!

All our garden boxes are locally made by The WoodSource using unfinished rough hemlock.

\*You must assemble your garden box when the wood is dry.

\*Before assembling your garden box, decide exactly where you would like it to stay. Moving an assembled garden box will not be easy. It weighs approximately 50kg or 110lb.

\*It is recommended to cut the lawn in a 4ftx4ft square and remove or turn over the grass. This allows for the roots of your plants/vegetables to grow deeper.

---

**Step 1:** Open box and make sure you have 4 corner posts and 8 side boards.

---

**Step 2:** Position the corner posts where you would like your garden box to stay.

---

**Step 3:** Insert one side board into the corner post one end at a time. Then slide on the other corner post. Repeat with the other two sides.

**Step 4:** On the fourth side, slide the board into both corner posts at the same time.

---

**Step 5:** Insert the second row of side boards, sliding both ends of the board at the same time. Repeat with all four sides.

---

**Step 6:** Fill your garden box with Greely's Topdressing Soil and plant away! Note that your half cubic yard bag will not fill your garden box to the top edge, leaving room for soil displacement when planting.

**"Happy Gardening!"**
